

IT Management Services

We offer an extensive list of services which can accommodate small networks with only one location and a few workstations, as well as large networks with multiple locations running hundreds of workstations.

Consulting Services from Network Administration to Cloud Computing

Part of what distinguishes R.O. Anderson from similarly sized and qualified competitors is our ability to successfully adapt and implement available computer technologies, such as computer aided design and drafting, GIS database software, hydraulic modeling software, and enterprise management software solutions, for the benefit of our clients.

Leveraging this knowledge, skill and ability, our Information Systems team now provides responsive services for the maintenance of computer file servers, Voice over Internet Protocol (VoIP) phone systems, integrated business management/information systems, and electronic document filing system. Electronic document imaging systems store all correspondence and documents generated and received in a searchable database for retrieval as PDF files. Our proven capability for maximizing information technology potential across several offices and remote workstations is available to assist our clients in establishing and maintaining similar systems for their records and other critical information.

Our team is knowledgeable of leading technology such as server virtualization which helps reduce the cost of new hardware and provides more redundancy to any network. R.O. Anderson also has the cloud covered with hosting or remote workplaces setup using Virtual Private Networking (VPN) or Outlook Anywhere (OWA).

To speak to someone who can answer your specific questions on how our Information Systems team can help your organization achieve it's IT objectives, please call Jonathan Young, CSSA at 775.215.5041 or email us at info@roanderson.com
